
CPTS 425 Lab Web History

1 SCENARIO OVERVIEW

A suspect was believed to have been leveraging an online platform for the illicit sale of drugs. The suspect posted drug information, scheduled illegal transaction locations and dates, and exchanged payment details with potential buyers.

Hypothesis

The following sequence represents the anticipated activities of the suspect:

1. The suspected drug dealer posted an ad on a website listing the sale of illegal drugs.
2. An interested buyer messaged dealer.
3. The dealer replied with transaction details (Bitcoin wallet).
4. The buyer sent payment.
5. The dealer confirmed payment was received.
6. The dealer shipped the drugs.
7. The buyer received the drugs.

2 TASK

The suspect uses the Chrome browser. You are given the Chrome history file.

Your goals

1. Extract potential evidence of drug trafficking from the web history.
2. Construct a detailed timeline of the suspect's illegal activities using the evidence.

Analysis strategy

1. Segment visit records based on visit_duration
 - Label each segment as Seg 1, 2, ...
 - visit_duration=0 indicates a redirect
2. For each segment
 - Exam visit records information
 - Join visits and urls based on the visit record
 - Interpret each field of joined visits and URLs

3 SUBMISSION

The deliverable will be a PDF report including

- A complete timeline of illegal activities. Refer to Table 1 for the expected format.
- Supportive screenshots for each segment, as evidence..

Visit ID	Date	Description	Duration (in second)
1	Tue Apr 19 06:54:18 AM PST 2022	User typed "craigslist" into Chrome address bar and generate a URL	0 (indicate a redirect)
2	Tue Apr 19 06:54:19 AM PST 2022	Without any delay (duration=0), Chrome sends the URL to Google and google returns results in web page with the title "craigslist - Google Search"	User stayed in the page for 0.727 second

Table 1: Timeline of illegal activities

4 REFERENCES AND RESOURCES

Below are some SQL queries that can assist you in extracting the necessary information from the Chrome history database.

```
select id, title, datetime(last_visit_time/1000000+strftime('%s','1601-01-01'),
'unixepoch','localtime') from urls;
```

```
select id, url, datetime(visit_time/1000000+strftime('%s','1601-01-01'),
'unixepoch','localtime'), from_visit, transition, visit_duration/1000 from
visits order by visit_time;
```

```
select id, "url_ref_ID: " || url, datetime(visit_time/1000000+strftime('%s','1601-01-01'),
'unixepoch','localtime'), "From_visit: " || from_visit, 'Tran:' ||
transition, "Duration: "||(visit_duration/1000) from visits order by
visit_time;
```

```
select "url_id: " || id, url, title from urls where id=2;
```
